

More About Polished Concrete

The level of grinding is what determines the sheen your finished concrete floor will have.

Available in a wide variety of colors, cuts, and textures. From matte finishes to a high polished shine polished concrete floors are becoming a popular flooring finish option for commercial, industrial, retail, and residential settings alike.

While you can get a rough estimate of the cost of a polished concrete floor by measuring your square footage, it is important to note that square footage is not the only consideration when it comes to actually having the work done.

The location, condition of the existing floor, design, and the level of shine desired are all important factors in determining the cost. The area that you need polished is also an important factor because of the process involved in grinding your concrete floor, larger floors are sometimes less costly to prepare than smaller ones due to the level of difficulty in working in small areas where much of the polishing will have to be done by hand.

Polished concrete floors are easy to maintain, Eco-friendly, have longevity, are economical, versatile, and invulnerable to moisture damage and mold.

If you are looking for an economical, eco-friendly floor polished concrete may be just the thing to consider.
